Before day one

Create the employee account, assign laptop serial number, and provision MFA. The recruiter sends the start date, home address, and phone number to IT only after the offer is signed. Badge pickup is coordinated with facilities.

Day one checklist

Install password manager, Slack, and VPN. Set the default printer, configure GitHub SSO, and verify access to email, calendar, and time tracking. If any access is missing, open a helpdesk ticket immediately.

First week

Check that the laptop is encrypted, backups run overnight, and the user knows how to reset MFA. The checklist closes only after the onboarding buddy confirms the account works in all required systems.
