Incident intake

Security incidents must be reported to security@docwise.example within one hour. When an incident is suspected, the on-call engineer freezes deployments and opens a ticket. Screenshots and timestamps are required for every report.

Containment

If credentials are exposed, rotate them immediately and invalidate active sessions. The security lead can request a temporary access freeze for any affected account. Do not forward incident details outside the security channel.

Postmortem

A postmortem is due within five business days after containment. Each postmortem lists the root cause, blast radius, remediation owner, and verification step. Track follow-up items in the security backlog until closed.

Contact matrix

Primary security contact: security lead. Backup contact: platform on-call. For vendor issues, route through procurement only after the security lead has acknowledged the incident.
