First week

On day one, enable GitHub SSO via Okta and collect a laptop from the IT cage on floor 4. Each new hire is assigned a buddy for 30 days. Required reading is the employee handbook and the leave policy. The first pull request must be opened within five working days.

Delivery

Staging deploys use make up on the staging cluster. Production deploys need two approvers from the on-call rotation. The default Python version is 3.12. The on-call starter rotation begins after 90 days.
